

Bulletin of Insectology Supplemental Material

Title: **Flight patterns of the European corn borer, *Ostrinia nubilalis*, in Slovenian hop gardens in 1999-2016**

Authors: **Magda RAK CIZEJ, Pasquale TREMATERRA**

Bulletin of Insectology, Volume 70 December 2017 pages 299-305

Figure S1. Seasonal flight dynamics of ECB moths indicated by light trap catches from 1999 to 2016 with temperatures and precipitations. On axis x are reported check time from third week (day 1, from about 14 to 21) of April until third week (day 151, from about 14 to 21) of September. Black histograms represent ECB catches; orange line represents daily medium temperatures in °C; blue histograms represent daily rain in mm.
