Bulletin of Insectology Supplemental Material<br>Title: Parasites-Iflavirus association and emergence of three master variants of DWV affecting Apis mellifera intermissa in Tunisian apiaries Authors: Khaoula Abdi, Khaoula Belguith, Chadlia Hamdi, Yasmine Souissi, Jihène Essanaa, Walid Dridi, Tarek Hajul, Amor Mosbah, Taoufik Ben Hamida, Ameur Cherif Bulletin of Insectology, Volume 71 December 2018 pages 273-282

[^0]Table S1. Locations, distribution and screening results of the 56 sampled hives from 28 apiaries. A1-A7, apiaries located in Bizerte; A8-A14, apiaries located in Jendouba; A15-A21, apiaries located in Siliana; A22-A27, apiaries located in Beja region. H refers to the sampled hive within the apiary.

| Location | Colony | Varroa destructor \% | DWV type A | $\begin{aligned} & \hline \text { DWV } \\ & \text { type B } \end{aligned}$ | N. apis | N. ceranae |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
